

Is the drop cable a butterfly-shaped optical cable

Article Overview

FTTH drop cables are often butterfly-shaped, but not all drop cables use this design; the butterfly structure is a common type for indoor and compact installations.

Butterfly-Shaped Drop Cable

A butterfly-shaped optical cable is a type of FTTH drop cable characterized by a flat, compact profile resembling a butterfly in cross-section. The optical fiber unit is positioned in the center, flanked by two parallel strengthening members, which can be non-metallic (FRP or KFRP) or metallic, and the cable is sheathed with LSZH or PE material for indoor or outdoor use . This design provides:

- Small bending radius and superior bend resistance, ideal for tight indoor routing .
- Lightweight and flexible structure, simplifying installation along walls, corners, and conduits .
- Enhanced tensile strength due to the parallel reinforcement members .
- Ease of splicing and connection in terminal boxes or distribution points .

Other Drop Cable Types

Not all drop cables are butterfly-shaped. Traditional drop cables may use a figure-eight structure, with two parallel strengthening cores and a central optical fiber, or a self-supporting design that adds a steel wire for aerial deployment . These designs are more common for outdoor or long-distance installations where mechanical stren...
