

# Israel-US telecommunications towers

## Article Overview

Israel has a developing independent towerco market with 7,800+ sites and 5G expansion underway, while the U.S. has a mature, large-scale shared tower infrastructure dominated by companies like Crown Castle.

### Telecommunications Towers in Israel

Israel's telecom tower market is relatively small but technologically advanced. The country currently has roughly 7,800 tower sites, most of which are owned by the three main mobile network operators (MNOs): Cellcom, Pelephone, and Partner. The only independent tower company, Communication Towers, owns 63 sites and is backed by the Aluma Infrastructure Fund. Its goal is to promote infrastructure sharing and accelerate the deployment of 5G, which is expected to require an additional 1,000–3,000 sites. Israel's telecom network is highly advanced, with early adoption of 5G launched in September 2020, and the industry generates significant revenue, projected to grow steadily over the coming years.

### Telecommunications Towers in the United States

In contrast, the U.S. has a mature and extensive tower infrastructure. Companies like Crown Castle provide shared communications infrastructure, including cell towers, small cells, and fiber networks, connecting millions of users and businesses across the country. The U.S. market emphasizes infrastructure sharing, large-scale deployment, and integration with fiber networks to support high-speed data and 5G services. Towercos in the U.S. operate thousands of sites, offering leasing and management services to multiple carriers, which allows for efficient network expansion...
