

KVM switch power failure

Overview

Solution: First, check if the switch's power indicator light is on and ensure the power source is properly connected. If there's a power switch, make sure it's in the "On" position. Problem 4: Certain displays do not show when using a KVM switch for your multi-screen. My apartment lost power on Wednesday morning and I think during a breaker flip something may have happened to the KVM. For a while, my monitors were working fine but I couldn't get my speakers or USB devices to follow the computer selection, and hotkeys were not working. Start by turning off all of the connected computers and peripherals, unplugging everything from the KVM, including power, and leaving it for 10 seconds. Ensure at least one input computer is turned on.
