

Ladder-type cable tray specifications table

Article Overview

Ladder-type cable trays are designed with side rails and transverse rungs to support and manage cables, available in various materials, widths, depths, and load ratings to meet mechanical and electrical standards.

Materials and Construction

Ladder cable trays are typically constructed from steel, stainless steel (304 or 316), or fiberglass reinforced plastic (FRP) depending on the application . Steel trays often feature 16-gauge tubular steel for side rails and rungs, while FRP trays use pultruded or molded composites with 45–65% glass fiber content for strength and UV resistance . All materials are designed to be fire retardant, with FRP trays achieving Class 1 flame spread ratings (≤ 25 per ASTM E-84) . Conductive resin systems may include carbon additives to dissipate static electricity.

Dimensions and Load Ratings

Ladder trays are available in various widths and depths to accommodate different cable bundles. Common nominal depths include 2" (51 mm), 3" (76 mm), 5" (127 mm), 7" (178 mm), and 9" (229 mm), . Rung spacing is typically 9.25 inches for FRP trays, while steel trays may vary depending on manufacturer specifications . Load capacity is defined by the Safe Working Load (SWL) and depends on the span between supports, with deflection measured at mid-span for single-span installations . Continuous spans may allow higher load ratings...
