

Light pen fiber optic patch cord

Article Overview

A fiber optic light pen, or Visual Fault Locator (VFL), is a pen-shaped tool that uses visible red laser light to test, locate faults, and verify continuity in fiber optic patch cords.

Overview

A fiber optic light pen is primarily used to identify breaks, sharp bends, or faults in fiber optic cables, including single-mode, multimode, and plastic optical fibers . It emits a red laser light, typically at 650nm, which travels through the fiber, making faults visible to the naked eye. This allows technicians to quickly pinpoint problem areas in patch cords, distribution frames, patch panels, and splice trays .

Key Features

- **Connector Compatibility:** Most VFL pens come with a 2.5mm universal connector and adapters to fit 1.25mm ferrules, making them compatible with SC, FC, ST, and LC connectors .
- **Modes:** Continuous (CW) and flashing (Glint) modes allow flexible testing and easier fault detection .
- **Durability:** Metal housing and protective dust caps ensure long-lasting use and prevent contamination of fiber ends .
- **Output Power and Range:** Typical output power ranges from 1mW to 10mW, with effective testing distances up to 10 km depending on fiber type and quality .
- **Portability:** Compact, pen-shaped design makes it convenient for field testing and on-site troubleshooting
