

Lightning Protection Measures for Fiber Optic Cable Reinforcing Cores

Overview

Lightning protection for straight-line optical cable lines: ①In-office grounding mode, the metal parts in the optical cable should be connected at the joints, so that the reinforcing core, moisture-proof layer and armor layer of the relay section of the optical. Lightning protection for straight-line optical cable lines: ①In-office grounding mode, the metal parts in the optical cable should be connected at the joints, so that the reinforcing core, moisture-proof layer and armor layer of the relay section of the optical. Lightning is an electrical discharge within clouds either from cloud to cloud or from cloud to the earth. It has great impacts on communication stations and other signal circuits. For example, it will not only affect all DWDM fiber channels in short bursts, but also affect transmission directions. Building a lightning protection system for fiber optic cables is essential to safeguard the network infrastructure from potential damage caused by lightning strikes. Electrical.
