

Live-line testing of power supply in distribution box

Overview

This article focuses on the testing aspect of this important process and looks at the minimum level of live testing required to verify the protective measure, automatic disconnection of supply (ADS), in the event of a fault in an electrical installation, in accordance with. This article focuses on the testing aspect of this important process and looks at the minimum level of live testing required to verify the protective measure, automatic disconnection of supply (ADS), in the event of a fault in an electrical installation, in accordance with. The Live Line Testers (LLTs) have been specifically designed to perform measurements for both live voltage testing and phasing on overhead lines, in substations and within switchgear compartments. Each Live Line Tester kit comprises of the following components housed within a heavy duty carry case. To ensure an electrical installation's safety, performance, and reliability, an entire checklist of functional tests must be performed. Designed for live line testing on lines up to 34. This process is meant to provide.
