

# Low Voltage Distribution Box Support Column

## Article Overview

A low voltage distribution box support column is an insulating component that provides mechanical support and electrical isolation for busbars and internal components in distribution boxes.

### Function and Purpose

Support columns, also known as insulator columns or busbar supports, are used to secure busbars and other internal components within low-voltage distribution boxes while maintaining electrical insulation from the cabinet and other conductive parts. They ensure mechanical stability, prevent short circuits, and allow safe operation under rated voltage conditions .

### Material and Construction

Typical support columns are made from BMC (Bulk Molding Compound) glass fiber reinforced compression plastic, which provides high insulation performance, mechanical strength, and resistance to high and low temperatures . This material ensures that the support column does not deform under heat or crack under cold conditions, maintaining both safety and reliability.

### Specifications

- Rated Voltage: Commonly up to 660V, suitable for most low-voltage applications ....
