

MPO branch optical cable

Article Overview

An MPO branch cable (fan-out or breakout cable) splits a high-density MPO/MTP connector into multiple individual connectors, enabling efficient fiber distribution in data centers.

Overview

MPO branch cables are designed to connect a single high-density MPO/MTP connector to multiple sub-connectors such as LC, SC, or MPO, allowing a single trunk cable to distribute signals to multiple devices. This approach maximizes port density, reduces cabinet space usage, and simplifies high-speed interconnections in data centers .

Structure and Fiber Counts

- Single MPO connector end: Typically carries 8, 12, 16, 24, or more fibers.
- Branch end: Splits into multiple connectors (LC, SC, ST, MTRJ, Mini-LC, etc.).
- Fiber types: Available in singlemode (G652D, G657A1/A2) and multimode (OM2, OM3, OM4, 62.5/125) fibers.
- Polarity options: Parallel (A-to-A, B-to-B), crossover (A-to-B, B-to-A), or paired crossover to match network requirements .

Key Features

- High-density connectivity: Consolidates multiple fibers into fewer cables, reducing clutter.
- Pre-terminated and factory-tested: Ensures controlled insertion loss and return los...
