

Matching Fiber Broadband with Routers

Overview

Yes, you can use your own router with fiber internet, as long as it has a Gigabit Ethernet WAN port to connect to your ISP's Optical Network Terminal. Upgrading to a Wi-Fi 6 or 6E router helps you get the full benefit of symmetrical fiber speeds. A fiber-optic connection is the best choice for fast home internet as it has a number of advantages compared to traditional copper cables, such as faster speeds and less interference. Many major ISPs, such as Verizon and Xfinity, offer fiber connections directly to your door, known as FttP or Fiber. This guide breaks down the top models for the best fiber optic modem router combo, covering everything from multi-gig LAN ports to mesh coverage and security features. A fiber optic line changes the game. Unlike cable or DSL, fiber delivers symmetrical upload and download speeds, meaning your 1. Fiber optics bring symmetrical multi-gig speeds to your doorstep, but the router you pair it with determines whether you actually feel that speed on your phone or PC. The key is matching the WAN interface to your ONT type and coverage needs to your home size.
