

Models and Specifications of Electrical Distribution Boxes for Chinese Construction Sites

Article Overview

Chinese construction sites commonly use IP65/IP66-rated electrical distribution boxes made from steel, aluminum, or engineered plastics, available in wall-mounted or floor-standing models with customizable sizes and capacities.

Types of Distribution Boxes

- **Wall-Mounted Boxes** Compact and space-saving, these boxes are fixed directly onto walls, ideal for small construction offices, temporary site facilities, or limited-space areas. They typically house circuit breakers, fuses, and terminal blocks and are available in IP54 to IP66 ratings for dust and water protection .
- **Floor-Standing Cabinets** Larger enclosures suitable for high-power distribution on construction sites. They can accommodate multiple busbars, circuit breakers, and control equipment. Dimensions range from approximately 800x600x400 mm to 2000x800x600 mm depending on load requirements .
- **Modular and Plug-and-Play Systems** These allow easy expansion or replacement of components without rewiring the entire system, suitable for dynamic construction environments where power demands may change .
- **Sealed or Dust-Proof Enclosures** Designed for harsh environments with high dust, moisture, or chemical exposure. IP65/IP66-rated boxes are recommended for outdoor construction sites to ensure long-term durability .
