

Multi-fiber grating measurement

Overview

Long-period gratings (LPGs) effectively sense various measurands, including pressure and curvature, enhancing measurement capabilities. Temperature-independent sensing solutions, like differential Bragg gratings, improve accuracy in multi-parameter applications. Concatenated Bragg grating fiber-optic sensors for simultaneous measurement of curvature, temperature, and axial pressure. Concatenated Bragg grating fiber-optic sensors for simultaneous measurement of curvature. Existing research primarily focuses on in-plane strain measurement, limited by the fact that fiber Bragg gratings are mainly sensitive to. Abstract—Exceptional points (EPs), intrinsic to non-Hermitian systems, exhibit singular spectral responses with extreme sensitivity to external perturbations, offering new opportunities for precision sensing.
