

Multimode fiber optic lc interface connector

Article Overview

A multimode LC connector is a small form-factor fiber optic connector designed for high-density, short-distance multimode fiber networks, offering reliable, low-loss connections.

Overview

The LC (Lucent Connector) is a widely used fiber optic connector featuring a 1.25 mm ferrule, which is half the size of SC connectors, making it ideal for high-density applications in data centers, enterprise networks, and SFP modules . Multimode LC connectors are specifically designed for multimode fibers such as OM1, OM2, OM3, and OM4, typically with core diameters of 50 μm or 62.5 μm . They are available in simplex (single fiber) or duplex (two fibers) configurations, supporting bidirectional communication .

Key Features

- High Performance: Low insertion loss (typically 50 dB) ensure minimal signal degradation .
- Compact Design: Small form factor allows twice the port density compared to SC connectors, optimizing rack space .
- Durability: Designed for repeated mating cycles (>500 insertions) without significant performance loss .
- Field-Installable Options: Connectors like UniCam® or anaerobic-cure LC connecto...
