

Namibia-branded hybrid optical and electrical cable OM5

Article Overview

OM5 multimode fiber in hybrid optical-electrical cables offers high-speed, short-range data transmission with wideband capabilities, suitable for modern Namibian infrastructure projects.

OM5 Fiber Overview

OM5 is the latest standard in multimode fiber, also known as Wide Band Multimode Fiber (WB-MMF), optimized for Short Wavelength Division Multiplexing (SWDM). It supports multiple wavelengths (850–950 nm), allowing four channels of data per fiber pair, which significantly increases bandwidth compared to OM4 (). OM5 has a 50 μm core diameter and a lime green jacket to indicate wideband capability (). It is backward compatible with OM3 and OM4, making it suitable for upgrades in existing networks ().

Performance and Applications

OM5 is designed for high-speed applications such as 40G, 100G, and 200G Ethernet over short distances, typically within data centers, enterprise networks, and telecom infrastructure (). Its modal bandwidth is 4700 MHz·km at 850 nm and 2470 MHz·km at 953 nm, supporting multi-wavelength SWDM transceivers (). Maximum transmission distances vary by data rate, with OM5 capable of 150 meters or more at 100 Gbps ()....
