

Network with PoE switches and fiber optic transceivers

Article Overview

You can extend PoE networks over long distances by using PoE switches with SFP fiber ports or media converters to connect fiber optic cables between switches.

Key Components

- **PoE Switches:** These provide both data and power to devices over standard Ethernet cables. Managed models offer VLAN, rate limiting, Class of Service, LLDP, and RSTP, while unmanaged models are simpler to deploy .
- **Fiber Optic Transceivers (SFP Modules):** Small form-factor pluggable modules that convert electrical signals to optical signals for transmission over fiber .
- **Fiber Optic Cables:** Offer long-distance, high-speed, and low-latency connections, capable of 1-10 Gbps over several kilometers .
- **Media Converters:** Required when a PoE switch lacks an SFP slot. They convert electrical Ethernet signals to optical signals and vice versa .

Setup Options

1. PoE Switches with Built-in SFP Slots

- Insert the SFP module into the switch's SFP port.
- Remove the dust cap and connect the fiber optic cable to the SFP.
- Repeat the process on the second switch.
- This setup allows direct fiber connectivity without additional converters
