

OEM Fiber Optic Hybrid Cable ADSS

Article Overview

ADSS (All-Dielectric Self-Supporting) fiber optic cables are non-metallic, self-supporting aerial cables ideal for high-voltage and long-span installations, with OEM options available for customized hybrid designs.

Overview of ADSS Cables

ADSS cables are all-dielectric, self-supporting fiber optic cables designed for aerial deployment without the need for metal messenger wires or grounding, making them suitable for installation along power transmission lines and telecom routes. Their dielectric construction eliminates induced voltages, allowing safe use in high-voltage environments. ADSS cables can carry both single-mode and multimode fibers, with fiber counts up to 144 or more, depending on design.

Cable Structure

ADSS cables typically feature:

- Optical fibers housed in loose tubes, tight buffers, or ribbon configurations.
- Strength members such as aramid yarns, FRP rods, or glass yarns to provide tensile strength and elongation properties.
- Water-blocking materials like tube jelly or water-blocking yarns to prevent moisture ingress.
- Outer sheath options including PE, AT, LSZH, FRPE, or PVC for environmental protection.
- Optional armor for additional mechanical protection in harsh environments. Two...
