

OPGW optical cable grounding principle

Overview

The OPGW cable is run between the tops of high-voltage electricity pylons. An optical ground wire (also known as an OPGW or, in the IEEE standard, an optical fiber composite overhead ground wire) is a type of cable that is used in overhead power lines. It serves two primary functions: Unlike traditional ground wires, OPGW contains optical fibers embedded within its metallic structure, allowing power utilities to transmit voice. Short summary: OPGW (Optical Ground Wire) is a revolutionary cable that combines the functions of a traditional ground wire for power lines with the high-capacity data transmission of a fiber optic cable. It incorporates both subterranean functionality (grounding) and datacom (data transmission), which makes it critical for power system safety and communication.
