

OTN Router 10G

Overview

An optical transport network (OTN) is a digital wrapper that encapsulates frames of data, to allow multiple data sources to be sent on the same channel. This creates an optical for each client signal. defines an optical transport network as a set of optical network elements (ONE) connected by links, able to provide functionality of transport, multiplexing.

Article Overview

An OTN 10G router enables high-speed, transparent transport of 10 Gigabit Ethernet traffic over optical networks using ITU-T G.709 standards.

What is an OTN Router?

An Optical Transport Network (OTN) router is designed to transport, multiplex, and manage client signals over optical fiber links while maintaining transparency and high reliability. It acts as a converged transport layer bridging next-generation IP networks and legacy TDM systems, encapsulating Ethernet, SONET/SDH, and other client protocols into standardized OTN frames (OTU/ODU/OPU) for efficient optical transmission . OTN routers support Forward Error Correction (FEC), performance monitoring, and alarm handling to ensure network reliability and service quality .

10G OTN Capabilities

A 10G OTN router specifically handles 10 Gigabit Ethernet (10GbE) traffic, transporting it over optical channels without modifying the client signal. Key features include:...

Optical transport network

An optical transport network (OTN) is a digital wrapper that encapsulates frames of data, to allow multiple data sources to be sent on the same channel. This creates an optical virtual private network for each client signal. ITU-T defines an optical transport network as a set of optical network elements (ONE) connected by optical fiber links, able to provide functionality of transport, multiplexing
