

Optical Power Meter with Green Light

Article Overview

Optical power meters capable of measuring green light are widely available, with options ranging from handheld field meters to advanced benchtop systems, supporting accurate measurements across visible wavelengths including green (around 520–560 nm).

Key Considerations for Green Light Measurement

Wavelength Compatibility: Green light typically falls in the 520–560 nm range. When selecting an optical power meter, ensure the sensor is calibrated for visible wavelengths, as some meters are optimized for infrared (InGaAs) or near-infrared ranges, which may not accurately measure green light.

- **Sensor Types:**
 - Silicon photodiode sensors are commonly used for visible light, including green, providing high sensitivity and fast response.
 - Fiber-coupled sensors allow measurement of light transmitted through optical fibers, useful for lab or field setups.
- **Meter Form Factor:**
 - Handheld meters (e.g., VIAVI pocket-sized meters, AFL OPM5/OPM4) are ideal for field installation and maintenance of fiber networks, offering portability, rugged design, and battery operation.
 - Benchtop meters (e.g., Thorlabs PM100 series, Newport 1936-R/2936-R) provide higher precision, multi-channel capability, and advanced data logging for lab or production environments.
- **Calibration and Accuracy:**
 - Look for NIST-traceable calibration to ensure accurate power readings at green wavelengths.
 - Some meters store calibration data in the sensor head, allowing multiple sensors to...
