

Optical cable stripper for armored cables

Article Overview

Armored cable strippers are specialized tools designed to safely remove the outer sheath of fiber optic cables, including steel tape and non-metallic armoring, without damaging internal fibers.

Key Features

Adjustable Blade Depth: Most armored cable strippers allow precise control of blade depth to match cable thickness, preventing damage to internal fibers. For example, the SI-01 stripper offers 0.25 mm incremental adjustments, while other models provide screw-based depth control for fine-tuning . **Dual Cutting Modes:** Many tools support both circumferential (around the cable) and longitudinal (lengthwise) cuts. This versatility allows technicians to remove jackets efficiently and prepare cables for splicing or termination . **Cable Diameter Compatibility:** Strippers handle a wide range of cable diameters. ScaleFibre's model supports 8–30 mm, SI-01 handles 10–25 mm, and other professional strippers cover 4–28.6 mm, accommodating most armored fiber optic cables . **Material and Build Quality:** High-quality strippers are made from aluminum alloy or aircraft-grade aluminum for durability and stability, with tool steel or tungsten carbide blades for cutting armored sheaths. Ergonomic handles and V-shaped guide wheels enhance control and reduce hand fatigue . **Special Features:** Some models include roller cable trackers or guide wheels to maintain cable stability during stripping, and replaceable blades for long-term use . Kits may also include spare blades for maintenance .
