

Optical splitter plug-in type optical splitter

Article Overview

Plug-in optical splitters are passive devices that divide a single optical signal into multiple outputs, offering easy installation and reliable performance for FTTH and PON networks.

Overview of Optical Splitters

An optical splitter is a passive device used in fiber optic networks to split or combine light signals from a single fiber into multiple fibers, enabling point-to-multipoint communication. They are essential in FTTH (Fiber To The Home), PON (Passive Optical Networks), and other high-speed fiber applications, allowing a single optical line to serve multiple subscribers efficiently and cost-effectively. Optical splitters are designed to maintain low insertion loss, high stability, and uniform signal distribution across all outputs .

Types of Optical Splitters

- PLC (Planar Lightwave Circuit) Splitters:
 - Use a micro-optical fabrication process to create a precise optical waveguide chip.
 - Offer high reliability, compact size, and excellent uniformity, suitable for large split counts (e.g., 1x16, 1x32, 1x64).
 - Ideal for FTTx, PON, LAN, and CATV networks .
- FBT (Fused Biconical Taper) Splitters:
 - Traditional technology where fibers are fused and tapered together....
