

Papua New Guinea Vibration Optical Cable Inquiry

Article Overview

Papua New Guinea's optical cable infrastructure includes the Coral Sea Cable System and upcoming Google-built undersea cables, enhancing connectivity with high-capacity, vibration-resistant fiber optics.

Existing Submarine Cable Infrastructure

The Coral Sea Cable System (CS²) is a 4,700 km long fiber optic submarine cable linking Sydney, Australia, to Port Moresby, PNG, and Honiara, Solomon Islands. It includes a 730 km domestic extension connecting Honiara to Auki, Noro, and Taro Islands. The system has four fiber pairs delivering a minimum of 20 Tbps capacity to PNG, significantly increasing the country's international bandwidth and reliability compared to satellite-based communications. The project was supplied and installed by Alcatel Submarine Networks and funded primarily by the Australian government, with PNG and Solomon Islands contributing to the costs (approximately AU\$200 million) .

Upcoming Google Undersea Cable Projects

Google is building three new undersea cables in PNG, funded by Australia under the Pukpuk Treaty, to link northern and southern regions of the country, including the Bougainville autonomous region. These cables aim to upgrade PNG's digital backbone, lower internet costs, and support economic growth, education, and investment from global digital enterprises. The project also provides strategic benef...
