

Plug-in type three-level distribution box

Article Overview

A three-level plug-in distribution box is a modular electrical panel that allows flexible, safe, and efficient power distribution using plug-in modules for each phase and neutral connection.

Overview

A three-level distribution box is designed to manage electrical power across three phases (L1, L2, L3) and neutral (N), often in industrial or commercial settings. The "three-level" term refers to the modular arrangement of plug-in units or functional layers, which can include circuit breakers, residual current devices, and auxiliary modules. These boxes allow plug-in installation, meaning components can be inserted or removed without extensive rewiring, improving maintenance efficiency and reducing downtime.

Key Features

- **Modular Plug-In Design:** Each functional unit, such as a circuit breaker or power module, can be plugged in or withdrawn independently, allowing easy upgrades or replacements.
- **Phase Flexibility:** Modules can be configured for single-pole, two-pole, three-pole, or four-pole connections, supporting L1+N, L2+N, L3+N, or full three-phase setups.
- **High Current Ratings:** Depending on the manufacturer, plug-in distribution boxes can handle currents from 40A up to 6300A, with short-circuit capacities up to 50kA.
- **Safety and Compliance:** These systems comply with international standards such as IEC 61439 for distribution boxes and IEC 61535 for plug-in connectors, ensuring ope...
