

Power supply in the network cabinet

Article Overview

Power Distribution Units (PDUs) are essential for providing reliable power supply in network cabinets, offering various configurations and features to meet your needs.

Overview of Power Distribution Units (PDUs)

Power Distribution Units (PDUs) are designed to distribute electrical power to multiple devices within network cabinets or server racks. They come in various configurations, including vertical and horizontal mounting options, to fit different rack setups. Here are some key features and options available:

-

Outlet Configurations: PDUs typically offer a mix of IEC 60320 C13 and C19 outlets, as well as standard UK outlets. This flexibility allows you to connect various devices, from servers to networking equipment .

-

Power Capacity: PDUs are available in different power ratings, such as 16A or higher, to accommodate the power needs of your equipment. High-density PDUs are optimized for environments requiring significant power delivery .

-

Monitoring and Control: Many modern PDUs come with intelligent features, including remote monitoring and control capabilities. This allows you to track power usage, manage loads, and prevent overloads, enhancing the safety and efficiency of your network cabinet
