

Price of Canadian Polarization-Maintaining Fiber Optic OS2

Article Overview

The price of Canadian Polarization-Maintaining (PM) Fiber Optic OS2 varies widely, typically ranging from USD 10 to USD 50 per meter for standard fibers, with higher costs for specialty patchcords or custom specifications.

Market Overview

Polarization-maintaining fibers are specialty optical fibers designed to preserve the polarization state of light, crucial for applications such as fiber optic gyroscopes, interferometry, quantum computing, and high-precision sensing . In Canada, the PM fiber market is growing steadily, with a market size of approximately USD 150 million in 2024 and projected growth to USD 300 million by 2033, reflecting a CAGR of around 7% . This growth is driven by telecommunications, aerospace, and defense sectors, which demand high-performance fiber solutions.

Factors Affecting Price

- **Fiber Type and Specifications:** OS2 single-mode fibers are optimized for long-distance transmission with low attenuation. PM fibers with OS2 specifications are more expensive than standard single-mode fibers due to their stress-induced birefringence and high polarization stability .
- **Connectorization and Patchcords:** Pre-terminated PM fiber patchcords with FC/PC or FC/APC connectors, hybrid terminations, and high extinction ratios (18-25 dB) can significantly increase cost .
- **Length and Customization:** Longer fiber lengths, custom coatings, or environment...
