

Price of Fire Protection Vertical Cable Tray

Article Overview

The price of fire protection vertical cable trays varies widely depending on material, size, and fireproofing method, typically ranging from \$50 to \$500 per meter or more.

Factors Affecting Price

- **Material:** Vertical cable trays can be made from galvanized steel, stainless steel, or aluminum, with stainless steel generally being the most expensive due to durability and corrosion resistance .
- **Fireproofing Method:** Fire protection can be achieved through intumescent coatings, mineral-based wraps, cementitious layers, or rigid enclosures. Intumescent coatings and mineral wool wraps are common and moderately priced, while fully enclosed steel fireproof trays are more costly .
- **Tray Type and Size:** Vertical trays come in different widths, heights, and load capacities. Larger or heavy-duty trays designed for industrial applications cost more. Accessories like splice plates, brackets, and firestop pads also add to the total cost .
- **Certification and Standards:** Products tested to UL 1709, ASTM E119, or EN 13501-1 standards may carry a premium due to verified fire resistance .
- **Supplier and Location:** Prices fluctuate based on supplier, stock availability, and shipping costs. Some suppliers provide quotes only upon request, as stock and pricing can change daily .

Typical Price Ranges

- Basic fireproof vertical cable trays (galvanized steel with standard intumescent co...
