

Price of High Voltage Busbar Clamps

Article Overview

High-voltage busbar clamps typically range from \$5 to \$50 per unit, depending on material, insulation, and configuration.

Price Range and Factors

The cost of busbar clamps varies widely based on several factors:

- **Material:** Stainless steel, aluminum, and copper are common. Copper or high-copper alloys offer superior conductivity but are more expensive, while aluminum variants are lighter and more cost-effective .
- **Insulation:** Insulated clamps, which reduce the risk of electric shock, generally cost more than uninsulated versions .
- **Configuration:** Single-saddle, double-saddle, and cylindrical clamps differ in complexity and support, affecting price. Double-saddle or adjustable clamps for larger busbars are typically higher in cost .
- **Voltage and Current Ratings:** Clamps designed for higher voltage or current capacities require more robust construction and may include additional coatings or plating, increasing the price .
- **Quantity and Supplier:** Bulk orders or wholesale purchases can reduce per-unit cost, while single-unit purchases from specialized suppliers may be at the higher end .

Typical Market Prices

- **Single insulated clamps:** Approximately \$5-\$15 per unit for standard industrial applications
