

Price of Hydraulic Busbar Processing Machine

Article Overview

Hydraulic busbar processing machines typically range from a few thousand to tens of thousands of USD, depending on capacity, automation, and features.

Price Range Overview

The cost of a hydraulic busbar processing machine varies widely based on its functionality, automation level, and production capacity. Basic manual or semi-automatic hydraulic bending machines can start at around \$3,000-\$10,000, while multi-functional machines that combine bending, cutting, punching, and CNC control can range from \$15,000 to over \$50,000 for industrial-grade units . Full CNC systems with advanced digital controls and programmable bending angles are at the higher end of this spectrum .

Factors Affecting Price

- **Automation Level:** Manual or portable machines are cheaper, semi-automatic systems with digital controls cost more, and fully CNC machines are the most expensive .
- **Machine Capacity:** Maximum busbar width, thickness, and bending force directly influence the price. Machines designed for thicker copper or aluminum busbars require stronger frames and cylinders .
- **Functionality:** Single-operation machines (bending only) are less expensive than multi-function machines that integrate cutting, punching, and notching .
- **Tooling and Control Features:** Special dies, encoder-based angle control, HMI pan...
