

Price of Optical Switching and Optical Modules

Article Overview

Optical modules can range from \$10 to several thousand dollars per unit, while optical switches typically cost from a few hundred to several thousand dollars depending on type and specifications.

Optical Modules Pricing

The cost of optical modules varies widely based on speed, form factor, brand, and technology. For example:

- SFP/SFP+ modules: Prices can range from \$10 to several hundred dollars per module, depending on whether they are single-mode, multimode, copper, or branded OEM modules like Cisco, Juniper, or Arista, which often carry a 20–40% premium over third-party alternatives due to warranty, support, and guaranteed compatibility .
- 10G, 25G, 40G modules: Third-party modules can be 50–60% cheaper than OEM equivalents, with price reductions varying by vendor and module type .
- 400G optical transceivers: These high-speed modules can cost hundreds to thousands of dollars each, influenced by form factor (QSFP-DD, OSFP), thermal design, and low-volume production costs . Factors affecting module pricing include raw materials (lasers, silicon chips), precision manufacturing, R&D, supply chain logistics, and market demand. Modules using the latest technology or higher speeds generally carry a premium .
