

Recommended Products for Optical Module Testing Equipment

Article Overview

Top recommended optical module testing solutions include Keysight photonic analyzers, Yokogawa MATS platforms, Luna OBR systems, and JPT Module Testers, each offering precision, flexibility, and high-throughput capabilities.

Keysight Photonic and Optical Test Equipment

Keysight offers a broad range of photonic component analyzers (XP1-XP6) and coherent transmission testers (XP7-class) suitable for characterizing optical components, transceivers, and high-speed data center networks. These instruments provide high-fidelity measurements of modulated optical signals, including error vector magnitude (EVM), Q-factor, and phase error. Keysight solutions are ideal for both R&D and production validation, supporting multi-level modulated signals up to 200+ Gbaud and offering modular configurations to match specific bandwidth and channel requirements .

Yokogawa Multi Application Test System (MATS)

The MATS platform is an integrated system for high-precision, high-throughput testing of optical devices and photonic components. It supports optical and SMU modules, hot-swappable reconfiguration, and long-term reliability for 24/7 production. MATS is commonly paired with optical spectrum analyzers (OSAs), wavelength meters (WLMs), bit error rate testers (BERTs), and high-speed oscilloscopes. It is particularly suitable for silicon photonics LIV testing and other advanced optical characterizatio...
