

Red electrical distribution box at the construction site

Article Overview

A red electrical distribution box is a temporary power distribution unit used on construction sites to safely supply electricity to tools, lighting, and equipment.

Purpose and Function

A red electrical distribution box, often called a site box or construction power distributor, provides a temporary and safe electrical supply before permanent wiring is installed. It distributes electricity from the main feed to multiple outlets, allowing workers to power tools, lighting, and other equipment efficiently (). These boxes are designed to handle three-phase or single-phase power depending on site requirements ().

Safety Features

Construction site boxes are equipped with several safety mechanisms:

- Circuit breakers and differential switches to prevent overloads and short circuits ().
- Emergency stop buttons for immediate power shutdown in case of hazards ().
- Grounding and protective enclosures to reduce the risk of electric shock ().
- Robust, weatherproof housings (IP65-IP67 rated) to withstand rain, dust, and impact on outdoor sites ().
