

Remote transmission module of optical platform

Overview

It is fully managed, configured and monitored remotely as part of the network, via FMT management software, and incorporates several types of modules: EDFA, DCM, OEO, OLP, etc. It is a module that intelligently adapts to the needs of network administrators. In a simple way, you will connect devices from different manufacturers. You will find. High-performance 100G - 800G, single fiber capacity 96T, optical and electrical in one platform, flexible in board dimensions, and smooth evolution to 1T/2T. Real-time monitoring and intelligent diagnostics on the network at every level every time, covers service, optical channel, fiber failure. Optical communication is a technology that enables high-speed information transmission by converting electrical signals into optical signals. It uses optical fibers to transmit signals, offering significant improvements in transmission speed and quality over traditional electrical signal. Lumentum solutions address the continually increasing needs for higher data transmission speeds, fiber optic network capacity and network agility. Automated: In addition to GIS mapping and powerful analytics, the cloud-native EXFO RFTM offers automated test configuration, execution and results, as well as open APIs.
