

Requirements for Waterproof and Fireproof Distribution Boxes

Article Overview

Waterproof fire protection distribution boxes must combine IP65–IP68 water ingress protection, fire-resistant materials, secure mounting, and proper cable sealing to ensure safety and reliability.

Key Requirements

1. Ingress Protection (IP Rating) Distribution boxes should meet IP65 to IP68 standards to prevent water, dust, and moisture from entering the enclosure. IP65 ensures protection against water jets, while IP68 provides full immersion resistance, making it suitable for outdoor and industrial environments . 2. Fire Resistance The enclosure must be made of fire-resistant materials, such as UL 94-rated plastics or metal alloys, capable of containing electrical fires and preventing spread to surrounding areas . This is critical for both indoor and outdoor installations. 3. Material and Durability

- Housing: ABS or polycarbonate plastics are common for lightweight, impact-resistant enclosures.
- UV Stabilization: For outdoor use, materials must resist yellowing and cracking under sunlight.
- Thermal Range: Enclosures should withstand temperatures from -25°C to $+85^{\circ}\text{C}$, suitable for deserts, coasts, and cold climates . 4. Mounting and Structural Integrity
- Mount on a flat, structural surface using certified hardware.
- For concrete walls, use M6 expansion bolts tightened to 9 Nm...
