

Requirements for grounding wires of relay protection

Overview

122 specifies the minimum size of equipment grounding conductors based on the rating of the overcurrent device protecting the circuit. Most projects follow a combination of IEC protection guidelines, IEEE standards, and local electrical codes that govern layout, environmental control, grounding, and access. Relay rooms. A grounding terminal or grounding-type device on a receptacle, cord connector, or attachment plug may not be used for purposes other than grounding. (b) Branch circuits — (1) Identification of multiwire branch circuits. Where more than one nominal voltage system exists in a building containing. ounding electrical installations. The terminology used in this article has been a source of much confusion over the years so pay careful attention to the definitions pertaining to Article 250.
