

Router optical fiber signal not connected

Article Overview

A “fiber signal not connected” issue usually stems from physical cable problems, dirty connectors, or router/ONT configuration errors, and can often be resolved through systematic inspection and testing.

Check Physical Connections

Start by inspecting the fiber optic cable for visible damage, sharp bends, or loose connectors. Ensure the cable is properly seated in both the router/ONT and the wall outlet or network terminal . Even minor misalignment can prevent the signal from being detected. If the cable appears damaged, replace it with a known-good fiber cable.

Clean Connectors

Fiber connectors are highly sensitive to dust and oil. Use lint-free wipes and isopropyl alcohol or a fiber inspection microscope to clean the connectors . Dirty connectors are a common cause of signal loss.

Test the Router and Transceivers

Power cycle your router or optical network terminal (ONT) by unplugging it for 30 seconds and reconnecting . If the problem persists, check the transceivers (if applicable) and swap them with known-working units to rule out hardware failure . Look for indicator lights such as LOS (Loss of Signal), which signal connectivity issues....
