

Secondary distribution box 1000V

Article Overview

A 1000V secondary distribution box, often a DC combiner box or HV PDU, safely manages high-voltage DC power for solar, industrial, or electric vehicle applications.

Overview

A secondary distribution box rated for 1000V is designed to consolidate multiple high-voltage DC inputs and distribute them safely to inverters, loads, or battery systems. These units are commonly used in commercial and industrial solar photovoltaic systems, electric vehicles, and other high-voltage DC applications .

Key Features

- **Input/Output Configurations:** Boxes can support multiple input strings (2-6) and multiple outputs (1-2), allowing independent management of circuits for different inverters, battery storage, or load zones .
- **Protection:** Integrated MCBs, fuses, or surge protection devices safeguard the system against overcurrent, short circuits, and voltage spikes .
- **Enclosure:** Typically IP65-rated, corrosion-resistant, and suitable for outdoor installation, ensuring durability in harsh environments .
- **Monitoring and Control:** Some high-voltage PDUs allow integration of controllers, diagnostic functions, and battery management components, enhancing operational safety and efficiency .
