

Secondary distribution box with double doors

Article Overview

A double-door secondary distribution box is a robust electrical enclosure designed for safe, organized, and accessible distribution of power across multiple circuits in commercial or industrial settings.

Overview

A double-door secondary distribution box serves as a central hub for managing electrical power in a building or facility. It houses essential components such as circuit breakers, busbars, switches, and wiring systems, providing protection, control, and organized distribution of electricity. The dual-door design allows technicians to access one side without disturbing live equipment on the other, improving safety and serviceability.

Design Features

- **Dual Doors:** Split front panels for independent access, enhancing maintenance and inspection efficiency.
- **Materials:** Typically constructed from steel, stainless steel, or GRP, offering durability, corrosion resistance, and impact protection.
- **Protection Ratings:** Commonly rated IP42 to IP66 or NEMA 3R/4/4X, ensuring protection against dust, moisture, and harsh environmental conditions.
- **Modular Interior:** Customizable layouts with removable gland plates, cable management options, and mounting plates for flexible installation
