

Select Fiber Optic Patch Cord

Article Overview

Selecting the right fiber optic patch cord requires considering fiber type, connector type, length, jacket material, and application-specific performance requirements.

Understand Fiber Types

Fiber optic patch cords come in single-mode and multi-mode varieties. Single-mode cables have a narrow core and are ideal for long-distance transmission, such as telecom networks or campus backbones, due to minimal signal attenuation. Multi-mode cables have a wider core, making them suitable for short-distance connections like server rooms or office networks, where high bandwidth over shorter distances is needed .

Choose the Right Connector

Connectors determine compatibility with your devices. Common types include LC, SC, FC, ST, and MPO. If both devices have the same port type, use matching connectors (e.g., LC-LC, SC-SC). For devices with different ports, hybrid connectors like LC-SC or LC-FC may be required. Connector polishing also matters: APC connectors offer lower return loss and are preferred for high-precision applications like FTTx, PON, or WDM, while UPC connectors are suitable for less sensitive systems .

Determine Cable Configuration

- Simplex: Single fiber with one connector at each end, ideal for bi-directional BIDI modules....
