

Several distribution boxes installed side by side

Article Overview

Distribution boxes can be installed side by side if proper spacing, accessibility, and safety standards are maintained.

Key Considerations for Side-by-Side Installation

Spacing and Accessibility: When installing multiple distribution boxes next to each other, ensure there is enough clearance for safe operation, maintenance, and wiring. Typically, boxes should be mounted at a height of around 1.5 meters for easy access, and sufficient space should be left between boxes to allow for opening covers and servicing internal components . **Modular Design:** Modular distribution boxes, such as Panasonic's 16+16 or 32-module surface-mounted boxes, are designed to be installed side by side. These systems allow for expansion without compromising safety, and they often include features like transparent covers and DIN rails for neat wiring . **Ventilation and Heat Dissipation:** Side-by-side installation can increase heat accumulation. Ensure that boxes have adequate ventilation or heat dissipation features, especially if they house high-power components or electronics that generate heat . **Electrical Safety and Standards:** Each box should comply with local electrical codes (IEC, NEC, or regional standards). Proper grounding, correct wire gauge, and protective devices like MCBs, RCDs, or surge protectors must be installed in each box. Avoid overcrowding circuits to prevent overloads . **Material and Environment:** Choose boxes based on the installation environment. Indoor setups can use plastic or steel enclosures, while outdoor or industrial applications may require corrosion-resistant, UV-protected, or IP-rated enclosures . Ensure that side-by-side b...
