

Singapore construction site electrical distribution box models

Article Overview

Construction site electrical distribution boxes in Singapore are typically designated as Socket-Outlet Assemblies (SOAs) or distribution boards, compliant with CP 88:2001 and EMA regulations, with models such as HENSEL ENYBOARD, ENYSTAR, and ENYMOD Mi.

Regulatory and Safety Standards

In Singapore, temporary electrical installations on construction sites must comply with the Workplace Safety and Health (Construction) Regulations 2007, the Electricity (Electrical Installations) Regulations, and the Code of Practice CP 88:2001. CP 88 specifies that distribution boxes, often called Socket-Outlet Assemblies (SOAs), must safely house protective devices and provide industrial socket-outlets for connecting portable equipment, minimizing the use of long trailing wires. All installations must ensure proper earthing, overcurrent protection, and safe isolation of circuits.

Model Designations and Features

Several models are commonly used on Singapore construction sites:

- HENSEL ENYBOARD: A compact distribution board for up to 63A, designed for safe and efficient terminal connections, suitable for commercial and industrial applications
- HENSEL ENYSTAR: A combinable enclosure system for distribution boards up to 2...
