

Single-mode dual-core fiber optic drop cable

Article Overview

A single-mode two-core drop fiber optic cable is designed for FTTH/FTTX applications, featuring two single-mode fibers, protective strength members, and a durable jacket for outdoor or indoor deployment.

Overview

Single-mode two-core drop fiber optic cables are primarily used to connect a service provider's distribution network to the end user's premises, supporting high-speed data, voice, and video services in FTTH or FTTX networks (). These cables are engineered for durability, flexibility, and ease of installation, suitable for aerial, underground, or indoor environments ().

Construction and Fiber Type

- **Fibers:** Typically, the cable contains two single-mode fibers, often G652D or bend-insensitive G657A types, with a core/cladding diameter of 9/125 μm (). Bend-insensitive fibers reduce signal loss in tight bends, improving performance in constrained installations ().
- **Strength Members:** Parallel FRP (Fiber Reinforced Plastic) rods or steel wires provide crush resistance and mechanical protection ().
- **Jacket Material:** Commonly LSZH (Low Smoke Zero Halogen) or UV-resistant outdoor jackets, offering flame retardancy, environmental protection, and compliance with FTTH standards ()....
