

Specifications and dimensions of external distribution boxes for electricity meters

Article Overview

External distribution boxes for electricity meters are weatherproof enclosures designed to house meters and branch circuits, with dimensions and specifications determined by service ampacity, phase, meter type, and environmental protection requirements.

Key Specifications

1. Enclosure Material and Construction

- **Materials:** Commonly steel, polycarbonate, or glass-reinforced plastic (GRP) for durability and weather resistance .
- **Protection:** Must meet NEMA 3R/4 or IP54-IP66 ratings for rain-tight and dust-resistant performance .
- **Temperature Resistance:** Surfaces should withstand up to 75°C plus internal heating effects .
- **Security:** Lockable doors, tamper-proof features, and corrosion-resistant finishes are standard for outdoor installations .

2. Dimensions and Internal Layout

- **Size Determinants:** Service ampacity (100A, 200A, 400A, 600A+), single- or three-phase service, number of circuits, and meter architecture (socket type, CT chambers, bypass, smart modules) dictate enclosure depth, width, and height
