

Specifications of UAE Tunnel Distribution Boxes

Article Overview

UAE tunnel distribution boxes are heavy-duty, high-performance electrical enclosures designed for harsh tunnel environments, supporting voltages up to 3300 V and complying with BS6164 and local safety standards.

Construction and Materials

Tunnel distribution boxes are typically fabricated from heavy-duty steel casings to withstand dust, water, and concrete casting during tunnel construction . For general UAE distribution boxes, materials include high-impact carbon steel, stainless steel, or thermoplastic, often treated with powder coating or passivation for corrosion resistance in humid or corrosive environments . Outdoor LT distribution boxes are made from 2 mm GI sheet steel with reinforced channels and slanted roofs to prevent water accumulation .

Protection and Safety Features

- Ingress Protection: IP55 or higher for outdoor and tunnel applications, ensuring dust and water resistance .
- Locking Mechanisms: Godrej-type 3-position locks with galvanized manual locking provisions to prevent rusting .
- Earthing: Solid earthing points on either side of the box for safety .
- Circuit Protection: Includes fuses, MCCBs, and transformers with individual protection for each output
