

Steps for connecting a fiber optic router

Article Overview

To connect a fiber optic router, you need an Optical Network Terminal (ONT) to convert the fiber signal, then link it to your router via an Ethernet cable.

Required Equipment

- Optical Network Terminal (ONT): Converts incoming fiber optic light signals into electrical signals your router can use, usually provided by your ISP .
- Fiber optic cable: Typically a thin yellow cable with SC/APC or SC/UPC connectors .
- Router: Ensure it supports fiber input or has a WAN port for Ethernet connection .
- Ethernet cable: Cat6a or higher is recommended to maintain high-speed performance .

Step-by-Step Connection

- Locate the fiber wall outlet: This is where your ISP's fiber line enters your home .
- Connect the fiber optic cable to the ONT: Remove protective caps, align the connector, and insert it into the ONT's optical port until it clicks securely .
- Power on the ONT: Wait 2-5 minutes for the status lights to stabilize, indicating a successful connection .
- Connect the ONT to the router: Use an Ethernet cable to link the ONT's LAN/Ethernet port to the router's WAN port .
- Power on the router: Wait for the indicator lights to confirm the router is online .
- Access the router's admin panel: Open a browser and enter the router's IP address (commonly 192.168.1.1 or 192.168.0.1) to configure Wi-Fi settings, security, and optional Quality of Service (QoS) for prioritized traffic
