

Technical Requirements for Assembly and Wiring of Distribution Boxes

Article Overview

Proper assembly and wiring of distribution boxes require adherence to mechanical, electrical, and safety standards, including correct enclosure selection, grounding, wiring, protection devices, and compliance with national and international codes.

Mechanical and Structural Requirements

- **Enclosure Material:** Distribution boxes are typically made of steel plates or insulating materials; wooden enclosures are not recommended. Steel thickness should meet minimum standards: 1.5mm for general enclosures, 2.0mm for doors and panels, and 3.0mm for back panels in power distribution cabinets .
- **Appearance and Coating:** The outer coating should be uniform, firmly attached, free of peeling, scratches, pits, or rust, and electrostatically sprayed if required .
- **Mounting and Installation Height:** Fixed boxes should be installed vertically, firmly, and without tilting. The bottom edge is typically 1.3–1.5m above ground for fixed boxes and 0.6–1.5m for mobile boxes . Two mounting lugs (40×4mm, 10cm length) are recommended for non-floor-standing boxes .
- **Ventilation and Accessibility:** Install in dry, well-ventilated areas to prevent overheating and ensure easy inspection and maintenance .

Electrical and Wiring Requirements

- **Wiring Materials:** Use high-temperature resistant copper core wires with cross-sectional areas suitable for the load current . Avoid bare conductors; main switches...
