

Telecom fiber optic cable plus router

Article Overview

To use a telecom fiber optic connection, you need a compatible fiber modem (ONT) and a router that supports fiber input, such as Telekom's Speedport or AVM FRITZ!Box models.

Equipment Needed

- Fiber Optic Modem (ONT): Converts the optical signal from the fiber cable into an Ethernet signal for your router. Most ISPs, including Telekom, provide this device .
- Compatible Router: Must support fiber connections, either with an integrated fiber modem or via an SFP module. Examples include AVM FRITZ!Box 5530 Fiber, 5590 Fiber, 5690 Pro, and Telekom Speedport Smart 4 Plus .
- Fiber Optic Cable: Typically a thin yellow cable with SC/APC or SC/UPC connectors .
- Ethernet Cable: Connects the ONT to the router's WAN port .

Connection Steps

- Locate the Fiber Wall Outlet: This is where the ISP's fiber line enters your home .
- Connect the Fiber Cable to the ONT: Plug one end into the wall outlet and the other into the ONT's designated port .
- Power On the ONT: Wait 2-5 minutes for the status lights to stabilize .
- Connect the Router: Use an Ethernet cable to link the ONT's LAN port to the router's WAN port .
- Power On the Router: Confirm connection via the router's indicator lights .
- Configure Wi-Fi and Network Settings: Access the router's admin panel (e.g., 192.168.1.1) to set up Wi-Fi, passwords, and other preferences .

Performance Considerations...
