

Temporary power distribution box division

Article Overview

Temporary power distribution boxes divide incoming electrical power into multiple circuits using various outlets and connectors to safely supply temporary setups.

Overview

Temporary power distribution boxes, often called spider boxes, are portable units designed to distribute electrical power from a single source to multiple devices or circuits in temporary environments such as construction sites, outdoor events, or emergency setups . They are engineered for mobility, safety, and flexibility, allowing quick setup and teardown while meeting industry safety standards .

Division and Configuration

Power division in these boxes is achieved through:

- **Multiple outlets:** Boxes typically feature a combination of 125V/20A receptacles, 250V/30A locking outlets, or higher-capacity 60A 3-phase connections depending on the load requirements .
- **Circuit breakers:** Each outlet or group of outlets is protected by individual circuit breakers to prevent overloads and ensure safety .
- **Connector systems:** Modern boxes use industrial-grade connectors, often waterproof and rated IP67, to handle harsh conditions and prevent accidental disconnections . Common systems include Weipu circular connectors or RST®/gesis...
