

The 100kW power supply for the communication site is intended for use in the oil and petrochemical industry

Article Overview

A 100kW power supply ensures reliable, uninterrupted energy for communication sites in oil and petrochemical facilities, supporting critical operations even during outages.

Key Features and Benefits

High Reliability and Black-Start Capability: Modern 100kW power supply systems, such as the FSP 100kW PCS, can automatically start and operate via batteries during a complete power outage, forming the core of an independent microgrid. This is crucial for oil and petrochemical sites where communication systems must remain operational under all conditions . **Modular and Scalable Design:** Single units of 100kW can be deployed individually or in parallel (up to 6 units for 600kW), allowing flexible expansion to meet growing energy demands. Modular power and control units can be independently replaced, reducing downtime and improving maintenance efficiency . **Intelligent Control and Integration:** These systems feature built-in P-Q control for real and reactive power adjustment, frequency-power control, and seamless integration with energy management systems. This ensures stable operation of communication equipment and allows dynamic dispatch of energy resources . **Compatibility with Hybrid Energy Systems:** 100kW power supplies can integrate with renewable energy sources, such as solar panels or wind turbines, and energy storage systems. This reduces reliance on fossil fuels, lowers operational costs, and supports ESG and net...
