

The electrical distribution box is next to the house

Article Overview

A distribution box near your house is generally safe and is typically placed for accessibility and compliance with electrical codes.

Location and Identification

A home's distribution box, also known as a breaker box or electrical panel, is the central hub for electricity entering your home. It is commonly located near the electrical meter, either on an exterior wall, in a garage, basement, or utility room . Outdoor placement allows quick access for emergency responders and utility inspections, while indoor placement is often in basements or garages for convenience and safety . The box is usually a rectangular metal enclosure with a hinged door, containing circuit breakers that control electricity to different areas of the house .

Safety Considerations

Living near a distribution box is generally considered safe. These boxes emit low-level electromagnetic fields (EMFs), which research indicates are not harmful at typical residential exposure levels . Safety precautions include:

- Keeping a clear area around the box (minimum 3 feet in front and 30 inches on the sides) to allow safe access .
- Ensuring the box is structurally sound and regularly inspected by a licensed electrician
