

Thickened Pigtail Terminal Box

Article Overview

A Thickened Pigtail Terminal Box is a fiber optic enclosure designed for secure splicing, management, and protection of fiber optic pigtails, featuring a reinforced, flame-retardant housing for durability and stability.

Key Features

Material and Construction: These terminal boxes are typically made from thickened ABS or cold-rolled steel with flame-retardant properties, providing resistance to pressure, shock, moisture, and high temperatures. Thickness ranges from 0.8mm to 1.0mm, ensuring long-term durability and minimal deformation even in humid environments . **Fiber Capacity:** Models are available for 4, 6, 8, 12, or 24 fiber cores, accommodating various network sizes and applications. They support both SC, ST, FC, and LC connectors, making them compatible with multiple fiber types . **Internal Design:** The interior is divided into fusion splicing compartments and fiber management areas, allowing for organized splicing, pigtail storage, and smooth fiber routing. This separation reduces fiber breakage and simplifies maintenance . **Installation Options:** These boxes can be wall-mounted, placed in weak current boxes, or used on desktops, offering flexibility for residential, commercial, or FTTH (Fiber-to-the-Home) deployments . **Protective Features:** The thickened, flame-retardant shell provides V0 fire rating, moisture-proofing, and impact resistance. This ensures the fibers are protected from environmental hazards and mechanical stress . **Applications:** Ideal for home broadband upgrades, electrical room wiring, residential community FTTH projects, and centralized cabling solutions. They are suitable for both professional installations and high-end residential networks . **Accessories:** Many models come with pigtails, flanges, and wall-mounting hardware, ready for immedia...
